

Healthy Interior air using Contra Sept®

PROBLEM

Mildew, germs, bacteria: A smelly carpet of them is often part of an air conditioning system. Standard cleaning methods have a negative effect on everyone in the vehicle - they may even cause illness in extreme cases.

Causes are evaporator cooling bars that are very close together, cooling bars which stay constantly wet and dust and contamination deposits

And if only the pollen filter is replaced during servicing the environment of the filter remain dirty. Dirt, particles, insect residues and microorganisms in the system need to be removed as well.

SOLUTION CONTRA SEPT®:

The patented and independently tested Contra Sept® evaporator cleaning procedure gently but efficiently reduces the number of microorganisms and the risks associated with them.

The evaporator is mechanically flushed. This combats both causes and symptoms.

- Improves interior air quality
- Most efficient of the products tested by daab
- Health friendly
- Convenient for allergic people
- Recommendation: flush the evaporator once a year

Cleaning those surroundings with Contra Sept® cuts the risk of harmful substances and bacteria getting into the interior despite filter replacement (or even because of it).

- Clean air Less pollen
- Fewer microorganisms
- Health friendly
- Independently tested

RANGE EXAMPLES:

Contra Sept® 980 Disinfectant Cleaner for Air Conditioning	Product information	MSDS
Contra Sept® 981 Disinfection of the Pollen Filter	Product information	MSDS

Contra Sept®: Most effective method in the test of the German Allergy and Asthma Association (daab)
